Clean Fittings

for Tube Weld & Metal Gasket Face Seal

- 1/4 to 1 inch and 6 to 18mm size
- 316L VOD and 316L VIM VAR Stainless steel material
- Weld Fitting for manual or Automatic welding equipment

Pressure Ratings

The Hy-Lok clean weld fittings and metal gasket face seal fittings are manufactured from material in accordance with material table, and calculated in accordance with ASME code for Pressure Piping B 31.3, Process Piping for allowable stress value of 20,000 psi (equivalent ASTM A269-tubing) wall thickness.

Pressure ratings for fittings are also determined by temperature applied to the fittings.

Allowable working pressure at temperatures greater than 100°F (37°C) may be obtained by multiplying factors shown in Table 1

To determine pressure ratings in accordance with ASME B31.1, Power Piping, multiply working pressure by 0.94

Table 1. Derating Factors

Temperature °F (°C)	Factor

Cleaning

Passivation is done in a Nitric environment.

Precision cleaning is done by Ultra-sonic cleansing with resistivity over 18MΩ D.I. water after finishing the passivation.

Packing & Handling

Hy-Lok clean fittings are double packed in anti-static polyethylene bags pressurized with high purity nitrogen gas.

Care should be used to maintain cleanliness.

Packing done in a clean room of Class 10 needs additional packing.

- A. To maintain and transport in standard-pack condition.
- B. Remove particles from outer package, open the cardboard or outer package before carrying into clean room.
- C. To move in double pack condition in clean room, take off the 1st package when used.
- D. Remove the 2nd package just before welding.

Mini Tube Butt Weld Fittings

- is suitable for the miniature tubing system.
- is available to install the parts closetogether.
- has the equivalent flow capacity with bigger sized weld fitting.
- Maximum working temperature is 100°F (37°C)

Radius junction means smooth flow transitions and elimination of pockets and entrapment zones.

Typical surface finish is average Ra 0.25 μ m (Ra 10 μ in)

Laser etch Marking Heat Code Traceability
HY-LOK Clean fittings are marked with Manufacturer, Part No., Material, Surface Finish, Heat Code No. designation.

Square, sharp, burr-free tube weld end.

TBW (Tube Butt Weld) and ATW (Automatic Tube Butt Weld) Fittings

- HY-LOK Clean fittings are applicable for two welding shapes. TBW (Tube Butt Weld) and ATW (Automatic Tube Butt Weld)
- TBW is machined for optimal Butt Welding by Automatic TIG welder.

Tube ends are machined with a square face and corners to enhance alignment and maintain tube wall uniformity.

Typical surface finish is average Ra 0.25 μ m (Ra 10 μ in)

Precisely finished diameter matches tube diameter.

Feature

- Provides ultra-high purity Metal to metal seal for vacuum and positive pressure applications.
- Sealing is accomplished by compressing the gasket between the two beads during assembly of the male nut or body and female nut.

1. Gasket options include - silver plated stainless steel 316L, Nickel plated, unplated nickel or special request.
2. Roll stamped or Laser etch Marking & Heat Code Traceability
Hy-Lok Clean fittings are marked with Manufacturer, Part No., Material, Surface finish, Heat Code No. designation.
3. Typical surface finish is average Ra 0.25 μm (Ra 10 μin)
4. QA leak test port also allows visual inspection of sealing gasket prior to assembly.
5. The internal surface finish of the female nut is silver plated to ensure consistent, low make up torque.

Plating

- Female Nut-The internal surface of the nut is silver plated to avoid galling and reduce the pull up torque.
- Gasket options include-Silver plated stainless steel 316L, Nickel plated, unplated nickel or special request.

Testing

- ZCR Fittings have been helium leak tested to a rate of 1×10^{-10} atm/cc/sec with unplated, silver plated and copper gasket.
- Optional tests are available upon request.

Care for Installation

- Do not attempt to reuse gaskets, use new gasket for remake installations.
- Protect bead end of ZCR during welding, shipping or storage by using the appropriate cap or plug.
- ZCR Fittings will not compensate for tube misalignment.
- Protect internal silver plating on threads of female nuts during polishing, brazing, operations or additional cleaning. These operations could remove the silver plating and cause thread galling.

Assembly Instruction

- Step 1. Prior to tightening fittings, make sure beads and gaskets are free of scratches and dirt.
- Step 2. Insert non-retained gasket into the female nut. The gasket is self aligning. Use caution not to damage sealing surfaces while inserting gasket into female nut.
- Step 3. Finger tighten male and female nuts assuring that all components have made proper contact and are in position for final tightening with wrenches. Inspection port in female nut allows for easy visual inspection.
- Step 4. Make a reference mark on both the female nut and male nut or body hex.
- Step 5. Hold the male nut or male body with the appropriate back up wrench and tighten the female nut 1/8 (316L and Ni gasket) turn past finger tight.

Caution

Do not rotate fixed thread components against the gasket. Hold the fixed thread component and tighten the corresponding rotating female or male nut 1/8 ~ 1/4 turn past finger tight.

SAFETY in FITTING SELECTION

For proper, safe, trouble-free installation, operation and maintenance of fluid systems, material compatibility, pressure/temperature ratings, and application details must be considered in the selection of fittings. Improper selection or use of products described in this catalog can cause personal injury or property losses. It is the responsibility of system designer and user to select and use the products for their specific applications.
